

MG4U

Marine Genomics for Users

Work Package 2. Knowledge analysis and clustering by specific end-users

Work Package 2 is designed to create a repository of knowledge mapping out the state-of-the-art in MG research, to identify key stakeholders, multipliers and ultimate end-users and their interests related to MG, to map the subject area by knowledge, skills and competence allowing gaps to be identified, and finally to combine the outcomes of these 3 tasks in order to select the relevant knowledge that needs to be transmitted to different target audiences.

Overall, WP2 aims to ensure that relevant, targeted knowledge is transferred to specific clusters of end-users, and that the end-users are capable of using the knowledge.
